## VISUAL COMFORT IS IN REACH

Workrite's flat panel monitor arms offer a range of motion that provides the comfort you deserve. Feel better. Work smarter.

Workrite believes physical comfort should not be a stretch. What you need is maximum adjustability and options. Workrite can provide them. It's simple: the greater the range of motion, the more users can satisfy their particular body sizes and comfort zones. Your posture and overall well-being improve. This allows everyone to perform at a higher level.

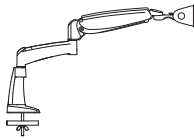

Make your workspace work harder. Collaboration is a lot easier when you and your colleagues can view the monitor. Sharing information from the same screen makes your meetings more productive.

Put it away. When not in use, easily move your monitor out of the way. The base of your flat panel monitor arm can be positioned at the rear edge of your desk, allowing you to reclaim valuable work surface real estate for other important tasks.

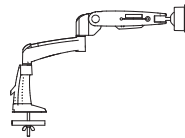

Workrite's Poise offers great reach, with fingertip adjustment across the full range of motion. For added vertical reach, try the Workrite SwingArm™. Both are available in two finishes and a wide variety of mounting options including panel system and tool bar adaptors. For added flexibility, each desk base version includes 3 attachment options as standard – grommet, bolt-through, and two-piece clamp.

Workrite Poise™ and SwingArm - Easy, Secure, Versatile.
